Interior doors

INTERNAL DOORS POL-SKONE INTERNAL DOORS

POL-SKONE is a guarantee of quality, unique design and a wide color range of surfaces with unique properties.

Solid interior doors

POL-SKONE wings are manufactured on the basis of **high-quality structures** and fillings, thanks to which they can meet the requirements of customers and adapt to their needs. **Classic doors** or **modern doors**? The joinery adjusted to the style of the interior will become a functional decoration of the space. The POL-SKONE product catalog

offers **over 450 door designs**, including stylish profiled and smooth doors, with glass or with decors. Such a wide range will make it easier for you to choose the perfect door leaves for your space.

When choosing a door, apart from design, their purpose and functionality are also important. **Right or left?** Remember about the direction of opening the leaves, properly selected **room doors** will facilitate the arrangement of the apartment. An option to choose are also **rebated doors**, where the leaf has a rebate that overlaps the frame or non- **rebated doors** with a straight edge of the leaf forming a uniform plane with the frame. The size of interior leaves is also important, **single-leaf doors** are available in the following dimensions: "60", "70", "80", "90" and **double-leaf doors**: "100", "110", "120", "160", "180".

In the POL-SKONE collections you will find fashionable **white doors**, gray doors, black doors and timeless leaves in various shades of wood. The line of **painted doors** makes it possible to cover the leaves in a unique shade with water-based paints from almost unlimited RAL and NCS color palettes. Rich colors are also guaranteed by **ECO TOP surfaces** with abrasion resistance properties, **HIGH TOP** with an additional wood structure effect, **SILKSTONE** also with a unique wood structure effect, **SILKSTONE CPL** with the characteristics and resistance of CPL 0.5 mm LAMINATE, **LAMISTONE CPL** with a coating protecting against abrasion and chemical agents, **LAMINATED** highly resistant surface recommended for public utility buildings. The closeness to nature is door **ensured VENEERED** by the covered with ecological UV varnish with much greater resistance to scratching and the action of light than standard varnishes.

EXTERNAL DOORS POL-SKONE

High-quality external doors for your home

The choice of external doors directly affects the **level of comfort and security of your home**. Therefore, adjust the model to your needs, so that it provides the household with a sense of peace and quiet. Before making the decision, pay special attention to parameters such as thermal insulation, acoustic protection and burglary resistance.

The door should provide protection against burglary, cold and noise. The guarantee of safety and comfort is based on high technical parameters and compliance with standards. The offer **POL-SKONE** includes **solid external doors** for a single-family house that will last for years. The brand's collections of exterior doors are

distinguished by **high heat transfer coefficients**. The doors are made with the utmost care, which is confirmed, for example, by a solid structure **based on a wooden** pine or oak stile.

Unique design will give an elegant setting to your building. Interesting glazing arrangements, decorative frames, stainless steel applications. The surfaces of the wings are painted with covering or transparent paints.

Rich equipment

External doors are one of the most important elements of the house. Their reliability is also influenced by **standard and additional equipment**. Depending on the collection, POL-SKONE offers extensive equipment that can improve the quality of the door, including: oak threshold, steel profile reinforcement, anti-theft system, thermal insulation layer, anti-burglary glass, gasket system package. You can add skylights.

Quality and experience POLSKONE

Brand **POLSKONE** the **guarantee highest quality and reliability**. As a renowned manufacturer of doors and windows, which for 30 years has been creating its products with passion and thinking about the requirements and needs of customers, we **set trends** on the woodwork market. One of the most important distinctions confirming the quality is the international to POL-SKONE, **certificate (S** orest Stewardship Council) awarded awarded only to producers who meet above-average environmental and social standards. The company's products are the perfect complement to any style of interior. POL-SKONE doors have been appreciated by both individual customers and professionals for many years.

The frame is an important element of the door system, which determines its functionality and attractive appearance. The basic criterion for differentiating door frames is their structure, which can be fixed or adjustable. A well-chosen one should match both technically - to the thickness of the wall, and aesthetically - to the style of the interior as well as the pattern and color of the door leaf.

When buying new doors, we often focus mainly on the selection of the door leaf, while the selection of the door frame is often the result of a quick decision. Meanwhile, a properly selected door frame plays a very important role, because as an elegant door frame, it effectively emphasizes their qualities. The key issue to be decided when choosing a door frame is its structure - fixed or adjustable. Each of them works well in a different type of interior and in different installation situations. **The POL-SKONE offer includes frames in both variants, made of MDF or pine wood, in many designs and colors.**

How to make the right choice?

Fixed frames have a specific width adjusted to the standard wall thickness, which is most common in modern construction. However, in the case of adjustable frames, the

width can be changed within a certain range, which allows for perfect adjustment to various dimensions. It is a very convenient solution, especially when we are dealing with non-standard wall thicknesses, e.g. in old-type buildings. Adjustable masking bands "cover" the wall on both sides, giving an elegant visual effect. Fixed strips do not have bands, so usually additional decorative strips are used during assembly to cover the connection points with the wall. Adjustable door frames are easier to install, have a wider application and provide an attractive finish without the use of additional elements. However, there are places where frames with a fixed width are better suited. This applies primarily to small rooms, where the massive door frame may turn out to be too heavy. Then the fixed frame will look more advantageous, which can be optionally enriched with delicate slats or quarter rounds. There are also situations where it is not technically possible to install an adjustable door frame due to the location of the door at the joint of perpendicular walls, where masking bands will not fit. Therefore, before

buying a door frame, we should take into account such issues as the thickness of the wall, the size of the space and the location of the door opening. In addition, the frame should match the color and pattern of the sash and the style of the interior design. It is worth remembering about this, especially when renovating, when replacing the old door leaf with a new one and considering keeping the current frame. The POL-SKONE offer includes fixed and adjustable door frames made of pine wood, MD boards and metal frames, intended mainly for industrial premises. The door frames are available in variants dedicated to rebated and non-rebated doors. Depending on your preferences, you can choose a frame with a modern design line, or referring to the retro style. The door frames are available in 80 colors, which allows you to choose a perfectly matching shade. Depending on the selected model, they are painted, veneered, laminated or covered with one of the following coatings: ECO TOP, HIGH TOP, LAMISTONE, SILKSTONE.

The frame is an important element of the door system, which determines its functionality and attractive appearance. The basic criterion for differentiating door frames is their structure, which can be fixed or adjustable. A well-chosen one should match both technically - to the thickness of the wall, and aesthetically - to the style of the interior as well as the pattern and color of the door leaf.
